

Administering Specialty Drugs Outside Hospitals Can Improve Care and Reduce Costs by \$4 Billion Each Year

Specialty prescription drugs administered by health care professionals are a **key driver of recent increases in health care costs**.¹ These medications include short-term regimens as well as maintenance treatments for chronic conditions. Since 2013, annual growth in per capita spending on administered specialty drugs has averaged **14 percent**.²

=

\$4 Billion
in savings each year

Compared to **independent physician offices**, hospitals charge more for specialty drugs and their administration, whether treatment takes place in a hospital facility or in a hospital-owned physician practice.

For certain administered specialty drugs, **treatment at home** can improve patients' physical and mental wellbeing and reduce disruption of work schedules and family responsibilities, all without increasing the likelihood of adverse drug events or side effects.⁴

The Savings Opportunity by Condition

Administering specialty drugs in **physician offices** and **patients' homes** instead of hospital outpatient settings offers the following savings opportunities per privately insured patient per year.⁵

Monthly Cost of Administered Specialty Drugs for Privately Insured Individuals, 2018

■ Hospitals ■ Physician Offices ■ Patients' Homes
